## Speech-Language Therapy

Our speech-language therapists use play and context-based strategies to help children communicate efficiently and effectively.

- Speech Developmental Milestones
- Articulation/Intelligibility
- Apraxia of Speech
- Oral Motor Deficits
- Expressive Language
- Receptive Language
- Non-verbal Communication
- Speech Fluency (stuttering)
- Pragmatics and Social Skills
- Augmentative Communication
- Reading Comprehension
- Writing Fluency

## Occupational Therapy

Our occupational therapists assist children with a variety of abilities in order to help them to be successful in their daily lives.

- Sensory Processing Disorders
- Fine motor skill development
- Handwriting
- Self care skills (dressing, toileting, etc)
- Visual motor skills
- Play skills
- Balance, Coordination, Strength & Endurance
- Self-regulation
- Attention
- Behavioral Difficulties

## Feeding Therapy

Our feeding therapy team is comprised of an occupational therapist and a speech-language therapist. Together, they can assess if the child is a picky eater or a problem feeder and help them increase the amount and variety of foods in his/her diet.

- Food aversions
- Avoidant of certain textures
- Limited diet/range of foods
- Oral motor difficulties (chewing and drinking)
